Website Monitoring and Backup Plans

Because you've got better things to do than monitor your website.

HALFTONE PIXEL
WEBSITE DESIGN & CONSULTING

Halftone Pixel keeps your website safe, secure and looking sharp!

For many businesses, your website is the primary form of marketing and like most assets, it requires maintenance and regular inspections to ensure it always works and makes the best impression.

We know you're a crackerjack business owner, but you just don't have the time to monitor your website regularly. Good news: You don't have to. Let us do that for you. Whether your website features 1 page or 101, here are four very important reasons your website needs to be monitored:

Backups: What would you do if your site disappeared? You've spent a lot of time and effort crafting the content for your website and keeping it fresh for your viewers. We back your website and all its content so if the unthinkable happens, you can get back online with minimal disruption.

We watch for malicious activity: Hackers are constant threat to any website and we'll watch to make sure those who shouldn't have access, don't.

Browser Updates: Browsers are continually upgraded and your site might not work or look the same after an update. We physically visit your site to ensure your site looks and works as intended.

Website Core Updates: The website platforms and the plug-ins that make your site shine require frequent updates. Outdated plug-ins or core files can leave you vulnerable to security breaches and breakages.
